**Getronics
Security &
Compliance**

Growing security pressure

Exec' Board

Security & Compliance is now a board room topic. It is no longer about anti-virus and firewalls, the scope and need impact the whole business.

Compliance

Sector, EU, State or International regulations are placing businesses under more pressure to implement and maintain mandatory controls.

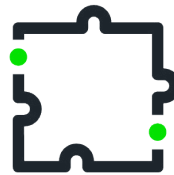

Experience & Trust

The global security skills shortage makes it difficult to attract and retain the right talent to achieve business objectives and maintain necessary security controls.

Secure Users & Data

Clients need and look for assurance that their users & data maintain the right level of confidentiality, integrity and availability.

Pragmatic

Clients need pragmatic standard, repeatable and consistent services to meet regulatory needs, balancing security over usability.

Visibility & Governance

Security testing and monitoring are key services that allow businesses to baseline and improve their security posture.

Increasing cyber threats

- **16B** identities exposed world wide
- **677M** malware variants detected in 2020
- More than **35B** connected IoT devices globally in 2021
- **715%** year-on-year increase in ransomware attacks
- Average cost of data breaches now **\$3.92 million**

The Getronics Security and Compliance portfolio

Businesses today require a more integrated approach to cybersecurity, in which security is embedded into the fabric of the organisation. From infrastructure to applications to the

design of your workplace, Getronics' solutions are secure-by-design and supported 24x7 by our Security Operations Centre to give you the reassurance and peace of mind you need.

Security Management

A dedicated, highly skilled security manager to advise and manage your Information Security & Compliance. Benefit from industry-wide knowledge and insight to further improve your organisational security posture.

User Security

Protecting users, endpoints and access to your IT environment and systems through Privileged Access Management (PAM), Multi Factor Authentication, Identity Management and User Security Training.

Security Assurance

Understand security, business continuity and compliance risks to your infrastructure. We leverage the latest commercial, public and custom-made tools and provide a comprehensive report that includes details advice and recommendations.

Infrastructure Security

Optimising the first lines of defence with Firewall Management, Perimeter Protection, DNS Protection and DDOS Protection.

Endpoint Security

Providing the monitoring, focus and control needed for today's IT through Endpoint Protection (EDR, UEM, AV, MDM etc.), Web Filtering and Email Hygiene.
